PROFESSIONAL SUMMARY

Full Stack Engineer with experience building modern web applications and AI-enabled solutions using Python, React, Angular, FastAPI, Django, SQL, MongoDB, Git, Docker, and Microsoft Azure. Strong foundation across frontend, backend, database, and API development, with growing specialization in applied AI/ML, intelligent automation, prompt-driven applications, and cloud-based solution delivery.

Comfortable working across the full software lifecycle, from UI development and backend architecture to deployment, integration, debugging, and production support. Positioned for Software Engineer, Full Stack Developer, and AI/ML Engineer opportunities with a practical focus on scalable web platforms and business-facing AI features.

CORE COMPETENCIES

Python

FastAPI

Django

Flask

React.js

Next.js

Angular

TypeScript

JavaScript

HTML5

CSS3

Bootstrap

Tailwind CSS

Full Stack Development

Web Application Development

Frontend Engineering

Responsive UI Development

Component-Based Architecture

Axure RP

REST APIs

API Integration

JSON

Authentication

OAuth 2.0

JWT

SQL

PostgreSQL

MySQL

MongoDB

SQLite

Structured and Semi-Structured Data Management

Azure Cloud

Azure App Services

Azure Storage

Azure OpenAI

Azure Machine Learning

OpenAI API

AI/ML Integration

Generative AI

LLM Integration

Prompt Engineering

LangChain

LlamaIndex

RAG Pipelines

Vector Databases

pgvector

Scikit-learn

Pandas

NumPy

Jupyter Notebook

Data Preprocessing

Model Evaluation

Classification

Regression

Intelligent Automation

Docker

Git

GitHub

Postman

Pydantic

CI/CD

Agile

Testing

Debugging

Cloud Deployment

Deployment Support

Environment Configuration

AI-Powered Applications

WORK EXPERIENCE

Full Stack Engineer / AI/ML Engineer

March 2024 - Present

Merik Solutions

- Build and maintain full stack web applications using **Python**, **React.js**, and **Angular**, delivering responsive user experiences backed by scalable APIs and data-driven business workflows.
- Develop backend services with **FastAPI** and **Django**, implementing modular application logic, API endpoints, authentication flows, validation layers, and integration patterns for frontend and third-party systems.
- Design and integrate **RESTful APIs** for web and platform features, enabling smooth communication between frontend modules, backend services, databases, and cloud-hosted components.
- Work with **SQL** and **MongoDB** to support transactional workflows, application data management, reporting needs, and flexible storage requirements across structured and semi-structured data.
- Contribute to **Azure-based** application development and deployment workflows, supporting cloud-hosted services, environment configuration, and application delivery for scalable business systems.
- Participate in AI/ML-focused solution development by integrating intelligent features into web applications, including automation-oriented flows, prompt-based interactions, document-oriented processing, and data-backed decision support features using tools and libraries such as **OpenAI-style APIs**, **Azure OpenAI concepts**, **LangChain**, and **Python-based ML workflows**.
- Support practical AI engineering use cases such as chatbot and API integration, document understanding workflows, classification-style business logic, retrieval-based knowledge experiences, and workflow automation where software and AI services intersect.
- Collaborate with cross-functional teams to translate business requirements into implementable product features, balancing usability, maintainability, delivery speed, and technical quality.

PROJECTS

AI-Powered Knowledge Assistant

- Designed an AI-enabled web application that allows users to query business knowledge through a conversational interface backed by structured backend services and retrieval-oriented response generation patterns.
- Built backend APIs with **FastAPI** to manage user queries, prompt orchestration, response formatting, and integration with LLM-style service flows.
- Developed a responsive frontend in **React.js** for user interaction, result presentation, and streamlined knowledge access across web workflows.
- Used **LangChain-style orchestration patterns** and prompt engineering techniques to structure interactions, improve answer relevance, and support practical AI-assisted user experiences.
- Applied database-backed storage and query handling using **SQL** for content organization, request tracking, and maintainable application flow.
- Containerized the application with **Docker** to support local consistency, environment portability, and deployment-readiness.

Cloud-Based Business Management Platform

- Built a full stack web platform for managing business workflows, user operations, and data-driven modules through a modern frontend and scalable backend architecture.
- Implemented backend services with **Django** and REST APIs to support business logic, authentication flows, CRUD operations, and integration across application modules.
- Developed interactive user interfaces using **Angular**, enabling responsive dashboards, form-based workflows, and efficient client-side interaction with backend services.
- Worked with **MongoDB** for flexible application data handling and feature support across dynamic and semi-structured business records.
- Supported deployment-oriented workflows on **Microsoft Azure**, aligning application delivery with cloud-hosted service patterns and scalable web application needs.
- Used **Git** for source control, collaboration, iterative delivery, and feature maintenance across the development lifecycle.

EDUCATION

Bachelor's in Computer Science

Oct 2023

Univeristy of the Punjab (Gujranwala Campus) | Pakistan
